

RemiVerse Whitepaper

RemiVerse is a decentralized live-streaming platform built on the Internet Computer Protocol (ICP). It enables users to broadcast live events, upload short-form video (RemiBlnks), and monetize content through blockchain-native tools including REMI tokens, NFTs (RemiNFTs), and transferable content rights (RemiRights).

The platform includes features such as:

- Live video streaming (RemiLive)
- Short-form vertical videos (RemiBlnks)
- NFT minting & meme creation (RemiNFTs, RemiMememes)
- Content ownership rights (RemiRights)
- Fiat and crypto wallet integration (RemiAccount, RemiCard)
- Referral rewards system (RemiReferral)

RemiVerse aims to be the next-generation YouTube + PayPal + OpenSea, all in one.
